Introduction - Oman Cables Industry (SAOG)

Oman Cables Industry (SAOG) was established in 1984 and started commercial production of building Wires in 1987. Setting a 10 year target period to manufacture L.V. Power Cables, Control Cables, Low Smoke Flame Retarding (LSF/FRLS) Cables, Over Head Line Conductors and Flexible Cables for both domestic and export markets, OCI was able to fulfill the mission in merely 8 years. Today, OCI is the largest cable manufacturer in Sultanate of Oman. Beside local sales, OCI exports to all the GCC countries, the Middle East, the Far East, Vietnam, Yemen, U.K., Pakistan, etc.

The company's reputation, manufacturing capabilities, quality and reliability bagged it large orders from world renowned EPC contractors like Snamprogetti – Italy, Snamprogetti – France, Chiyoda-Foster – Japan/U.K. OCI, in a short span of time, has successfully made its mark in 4 continents of the world against tough international competition. OCI products are also approved and registered with Department of Electrical Services, Ministry of Development, Negara, Brunei Darussalam.

Located in Rusayl, the Sultanate's largest industrial complex, the company is equipped with ultra-modern Plant & Machinery. OCI gives you a choice in wires, cables and conductors as per British standards, IEC specification, MEW-UAE, WED-Abudhabi, DEWA-Dubai, MEW Bahrain, Ministry of Defence and to other national and international standards. In 1994 the company was accredited with the ISO 9002 certification in remarkably short period of 6 months in line with OCI's proven capability to meet it's challenges. Added to it, OCI is now accredited with the ISO 9001- design capabilities certification, which further bears testimony to OCI's consistency in Quality Management. The company is also a proud recipient of His Majesty's trophy for the Best Industry Award in the year 1991, 1992, 1996 and 1997 – a unique award for it's achievements. Certificate of Honour for excellence in the year 1993, 1994, 1995, 1998, 1999 to 2000 were further awarded to OCI's success. The company continues to enjoy the position of the top ten best performing companies in the Sultanate since and has shown a steep rise in growth. This demonstrates the confidence the customer has reposed in OCI. The company draws strength from its highly experienced staff, design & project management resources and stringent Quality Assurance procedures to deliver total commitment to quality, reliability, safety and customer satisfaction.

OCI's performance has attracted world renowned 'DRAKA HOLDINGS NV' – The Netherlands, one of the largest 'Special Cables' manufacturing group in the world to participate in it's equity. With technical know-how and support of Draka Holdings, OCI is capable of displaying better growth and fostering customer satisfaction. As an affiliate of Draka Holding Organisation with operations in Europe, United States and the Far East, OCI is ideally positioned to service customers on both the national and global front. OCI offers combine unrivalled experience and a vast product range developed with the support, strength and resources of one of the world's most significant cable companies.

In the year 1999, OCI has successfully launched and started delivering solutions to the Instrumentation cables. Keeping in line with this success, the company has ventured into other hi-tech products, viz., special cables, Oil & Gas cables, etc., to its existing line of products. OCI is humbly proud of its efforts and success and believes success is not a destination but a journey. It will strive further to achieve even higher pinnacles of success and continue to offer better service and satisfaction to its distributors and end users.

OCI prides on its ability to offer products to each customer specific needs quickly, efficiently and with an assurance of product quality.

L.V. Power and Control Cables

Specifications

All cable designs covered in this publication generally conform to BS. 5467 or IEC 60502 Part-1 for XLPE and BS 6346 or IEC 60502 Part-1 for PVC insulated cables for working voltages upto 3300 volts.

Wherever required, OCI can offer cables conforming to other national or international standards or special requirements.

PRODUCT RANGE

1. XLPE Power cables (Armoured/Unarmoured)

Conductor	: Copper or Aluminium
Applicable Standards	: B.S. 5467, IEC 60502 Part-1, B.S. 7889
Voltage Grade	: 600/1000V or 1900/3300 V
Range	: 1C x 50 sq. mm to 1C x 1000 sq. mm 2C x 1.5 sq. mm to 2C x 400 sq. mm 3C x 1.5 sq. mm to 3C x 400 sq. mm 4C x 1.5 sq. mm to 4C x 400 sq. mm 3.5 x 10 sq. mm to 3.5C x 400 sq. mm

2. PVC Power Cables (Armoured/Unarmoured)

Conductor	: Copper or Aluminium
Applicable Standard	: B.S. 6346, IEC 60502 Part-1
Voltage Grade	: 600/1000V or 1900/3300V
Range	: 1C x 50 sq. mm to 1C x 1000 sq. mm 2C x 1.5 sq. mm to 2C x 400 sq. mm 3C x 1.5 sq. mm to 3C x 400 sq. mm 4C x 1.5 sq. mm to 4C x 400 sq. mm 3.5 x 10 sq. mm to 3.5 x 400 sq. mm

3. Control or Auxiliary Cables (Armoured/Unarmoured)

Conductor	: Copper
Insulation	: PVC
Applicable standard	: B.S. 5467, B.S. 6346, IEC 60502 Part-1
Voltage Grade	: 600/1000V
Range	: 5C x 1.5 sq. mm to 61C x 1.5 sq. mm 5C x 2.5 sq. mm to 61C x 2.5 sq. mm

4. Special Cables (FR, FRLS)

OCI also manufactures and supplies Cables as per other National or International Standards, and as per Customer Specifications.

TECHNICAL ADVISORY SERVICES

OCI's staff includes specialist Engineers with wide knowledge and decades long experience in the field of cables and their applications. This time tested technical expertise and experience is available to all the clients in the selection of appropriate cable design/specifications.

L.V. Power and Control Cables

XLPE Insulated Power Cables

CONFORMING TO IEC-502 AND BSS 5467

600/1000 VOLTS

1900/3300 VOLTS

Cable Construction & Manufacturing Process

Conductor : Copper or Aluminium used for the Conductors obtained in the form of rods. The 8.0 mm Copper or 9.5 mm aluminium rods. After testing, rods are drawn into wires of required sizes. These wires are formed into final Conductor in the stranding machines under strict Quality Assurance Program.

Insulation : Cross linked polyethylene compound or PVC is insulated over Conductor by Extrusion process.

XLPE insulated cores are cured by steam curing in vulcanizing chamber to provide thorough cross-linking.

The raw materials & thickness of Insulation are maintained under strict Quality Control and conform to B.S. 5467 / IEC 60502 Part-1 or B.S. 6346 / IEC 60502 Part-1 Standards for XLPE & PVC cables respectively.

The Cores of cables are identified either by colour or by numbers as follows:

No. of cores	Identification	New Colour coding*
1	Red or Black	Brown or Blue
2	Red & Black	Brown, Blue
3	Red, Yellow, Blue	Brown, Black, Grey
4	Red, Yellow, Blue & Black	Blue, Brown, Black, Grey
5	Red, Yellow, Blue, Black, Y/G	Blue, Brown, Black, Grey & Y/G
6- 61	By numbers	By numbers

*New colour coding is mandatory from 1st April 2006.

Laying up : The insulated cores are laid up with a right hand, or alternating left & right hand, direction of lay in the sequence of the core numbers or colours. Where ever necessary non-hygroscopic PP / PVC Fillers & binder tape are used to form a compact and reasonably circular cable.

Bedding : All armoured cables have extruded PVC bedding. The PVC used for bedding is compatible with the temperature of Insulation material.

Armour : When armouring is required, the armour consists of single layer of Galvanised steel wire. The armour is applied helical, with a lefthand direction.

We also provide other armours such as steel strip, tape or tinned copper.

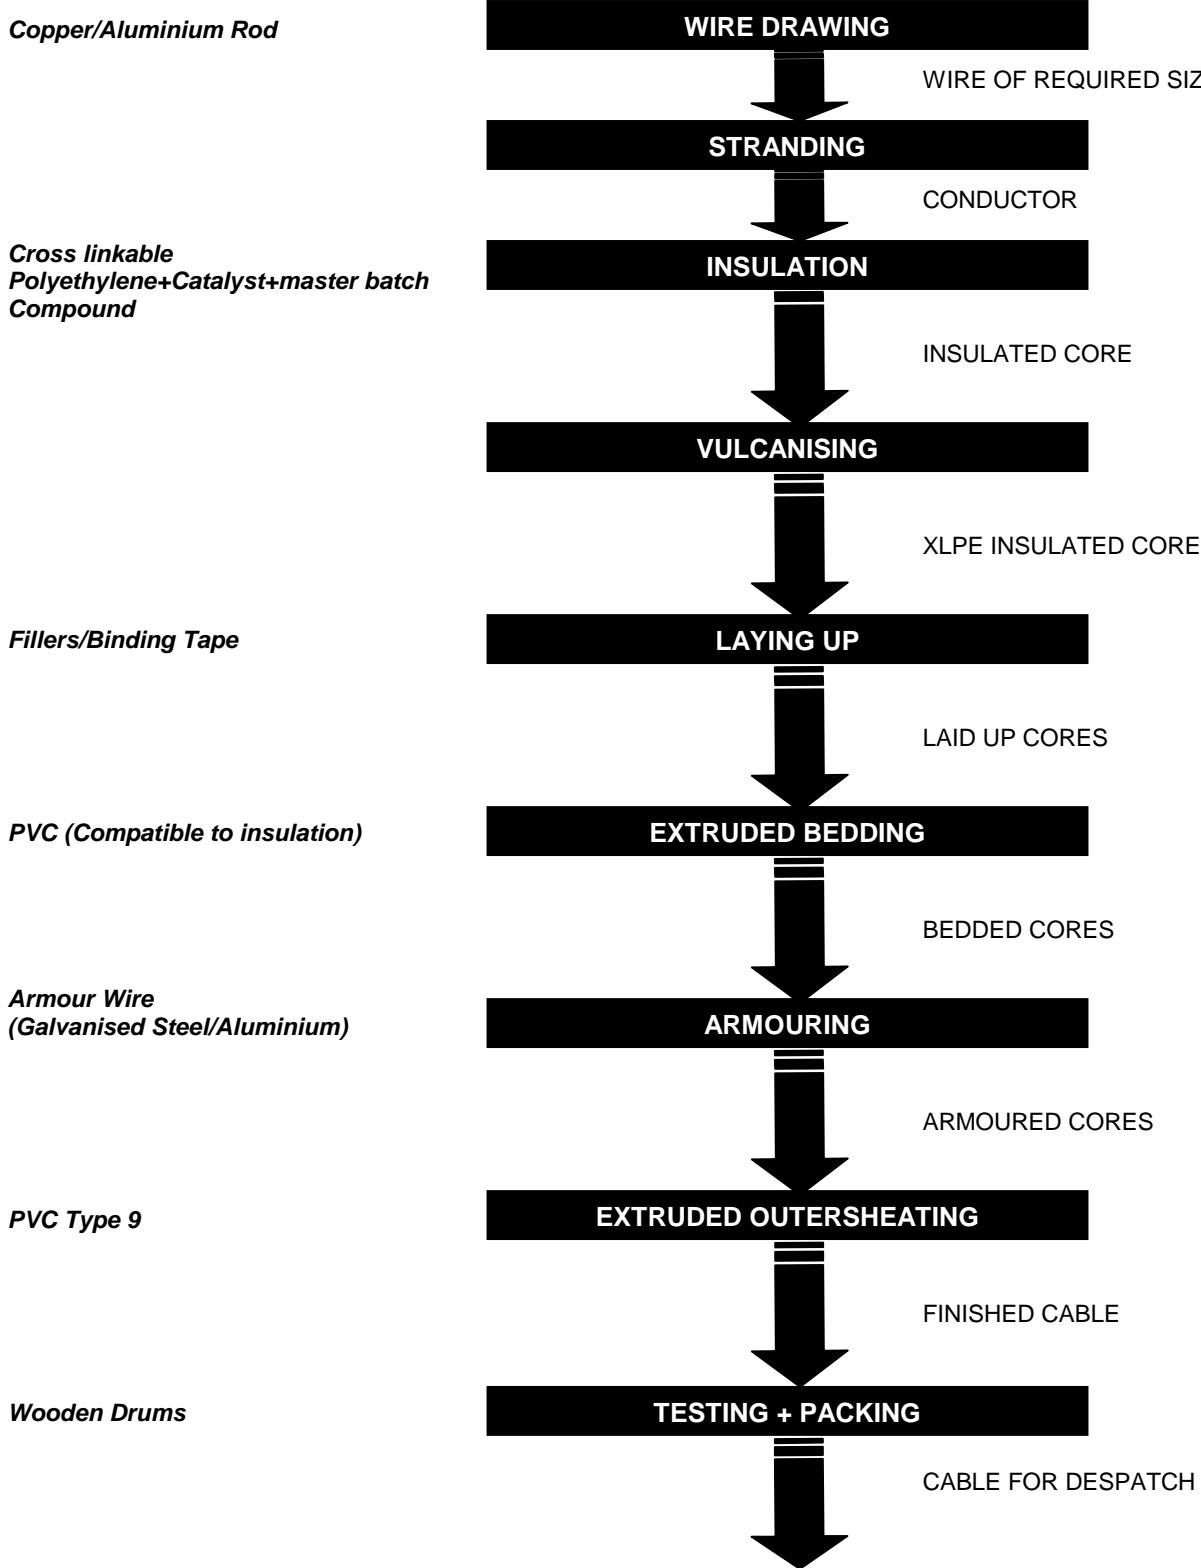

Single core cables are armoured with Aluminium or copper wires.

Outersheath : The standard cables are manufactured with Extruded black PVC Type-9 of B.S. 7655 or ST-2 of IEC 60502. Outersheath is embossed or printed with the information required by the related standards.

Special **FR**, **FRLS** compounds are used for outersheathing of cables, to suit customer's specification requirements.

XLPE Power Cable Manufacturing Process at OCI

Screening Methods For Control Cables

Screening for cables depends on the type of application of the cable. Control cables if laid along with the Power cables or MV cables or other cables having its magnetic field or which can cause problem in transmitting the signal.

OCI can provide screening for such cables for smooth operation of the cable. Copper tape screening over laid up assembly can reduce the interference. Cable construction is as per IEC 60502 Part 1.

Details of Construction:

Conductor	Stranded Copper Class – 2
Insulation	XLPE or PVC
Bedding	Extruded PVC
Screening material	Copper tape
Separation sheath	Extruded PVC type ST 2
Type of armour	Galvanized steel round wire
Outer sheath	Extruded PVC type ST 2

In addition to this construction, unarmoured construction can also be offered.

Type of screening material can be changed as per the application. Aluminium backed Mylar tape can also be used for screening purpose.

Notes On FRLS and FR Sheathed Cables

OXYGEN INDEX (ASTM D-2863)

The criterion for burning is presence of percentage of oxygen in air. By mixing oxygen and nitrogen at various percentages this test finds what percentage of oxygen the standard specimen starts burning. Higher the oxygen index higher the resistance to get ignited. Min. oxygen index shall be 30%.

TEMPERATURE INDEX (ASTM D- 2863)

Temperature index is the temperature at which the oxygen index of the material becomes 21. This set is carried out usually by extrapolation after the oxygen index is measured at the room temperature. Minimum temperature shall be 250 °C.

SMOKE DENSITY (ASTM D-2843)

This parameter relates to measuring and observing relative amounts of smoke produced by the burning or decomposition of materials. This test is carried out in accordance with ASTMD-2843. The measurements are made in terms of loss of light transmission through a collected volume of smoke produced under control standardized conditions. Generally requirement by customer is smoke density rating less than 60.

ACID GAS EMISSION (IEC-754-1)

During burning of cable materials acid gases are evolved especially hydrogen chloride. The gas emission is evaluated accordance with test method IEC 754-1, where approximately 1 gm. of the material is pyrolysed at 800 °C in a combustion tube and resultant gases analysed.

FLAME RETARDANCE (IEC 332 PART I)

A single cable sample is clamped vertically. The Bunsen or other similar burner is arranged at 45 Degree to the axis of the cable sample, applying flame at 475mm below to top clamp. The flame is applied for a period of time depending upon the weight of the cable.

The test requirement is that after all burning has ceased the charred or affected portion shall not have reached within 50mm from the top clamp.

FLAME RETARDANCE TEST (IEC 332 -3)

This test is carried out to check flame retardant properties of bunched cables. Three categories of tests namely class "A", "B" and "C" have been defined according to quantity of combustible material available over unit length. Cable pieces are tied on vertical ladder and a flame is applied from a horizontal ladder for some time, after wards burner is removed. All parameters are pre defined according to specification. Then charred portion is measured and compared with predefined value to decide on its acceptability.

GENERAL REQUIREMENTS OF PROPERTIES OF FR CABLES

Requirements

- | | | |
|--------------|---|-----------------|
| Oxygen index | - | Minimum 29 |
| IEC 60332-1 | - | Passes the test |
| IEC 60332-3 | - | Passes the test |

GENERAL REQUIREMENTS OF PROPERTIES OF FRLS CABLES

Requirements

- | | | |
|----------------------|---|-----------------------|
| Oxygen index | - | Minimum 29 |
| Smoke density rating | - | Maximum 60% |
| Acid gas | - | Maximum 20% by weight |

L.V. Power and Control Cables

IEC 60332-1	-	Passes the test
IEC 60332-3	-	Passes the test

QUALITY CONTROL

OCI maintains very high standards of product quality through a strict and efficient control system. OCI's Quality Assurance Department is fully equipped with modern testing equipment and instruments, duly calibrated and are of international standards. Quality assurance methods have been standardized and fool-proof procedures are established to ensure that every length of cable leaving OCI factory measures upto the most stringent specifications.

These quality control objectives are achieved through three principal control functions.

RAW MATERIAL CONTROL

All raw materials are procured only from suppliers of international quality repute and each lot carries the suppliers test report and warranty.

All raw materials undergo rigorous testing for their suitability before the manufacturing process on their arrival. OCI has laid down its own stringent specifications for each of these raw materials. A highly qualified and experienced staff ensures that all raw materials used in processing meet these stringent OCI specifications.

PROCESS CONTROL

A team of trained Quality Control Engineers is engaged in checking process variables at every stage of manufacture. Any deviation from standard process specifications is immediately brought to the notice of shop floor Supervisors/Engineers and corrective action is taken immediately.

PRODUCT CONTROL

Finished cable is put to rigorous Routine, Acceptance and Type tests, as per the international standards and quality assurance program. Our experienced Engineers ensure that OCI cables conform to the standards, fully in all aspects set by the technical group, which are well above the parameters stipulated in relevant international specifications.

ADVANTAGES OF XLPE CABLE AS COMPARED TO PVC CABLES

- Higher Power Rating
- Higher emergency overload rating
- Higher short-circuit rating
- Higher insulation resistance
- Higher resistance to moisture
- Lower installation cost
- Quick method of jointing & terminating
- Longer cable life
- Lesser cable weight
- Lesser cable dimensions

TUV Certificate

CERTIFICATE

The TÜV CERT Certification Body
for QM Systems of RWTÜV Systems GmbH

hereby certifies in accordance with TÜV CERT
procedure that

OMAN CABLES INDUSTRY (SAOG)
P.O. Box 25, Rusayl,
Postal Code – 124, Muscat
Sultanate of Oman

has established and applies a quality system for

Design and Manufacture of Low Voltage and Medium Voltage Electrical Power
Cables, Control Cables, Overhead Line Conductors, Instrumentation Cables, Pilot
Cables, Aerial Bunched Cables, Other Wires and Cables for Electrical Power and
Control Applications.

An audit was performed, Report No. 2.5-992/2000

Proof has been furnished that the requirements according to

ISO 9001 : 2000 / EN ISO 9001 : 2000 / ANSI ASQC Q 9001 : 2000

are fulfilled. The certificate is valid until 29 June 2006

Certificate Registration No. 04100 1994 0351

Essen, 25. 03.2004

Current Ratings & Voltage Drop of the Cables – 600/1000 V

Current Ratings of Cables

Current rating of Cables given below are based on the ERA (Electrical Research Association) report. ERA's report is accepted world wide and hence this report of current carrying capacity is referred by BS 5467 & BS 6346 standards. ERA publication 69-30, Part V can be referred for sustained current ratings of XLPE insulated cables. ERA publication 69-30, Part III can be referred for sustained current ratings of PVC insulated cables.

Current Rating Factors

Group Rating Factors for More than one Multicore Armoured or Unarmoured Cables

Laid on Trays, Clipped to the surface, run in Trench etc.

Common For Installation In Air, Ground, Duct, Trench Etc.

TABLE – 65

No. of load conductors	2	3	4	5	6	8	10	12	14	16	18	20
Correction factor	0.8	0.7	0.65	0.6	0.57	0.52	0.48	0.45	0.43	0.41	0.39	0.38

Where spacing between adjacent cables is more than twice their overall diameters, no correction factor need to be applied

Group Rating Factors for more than Three Single Core cables

Laid in Conduits buried in Concrete, on surface of Wall, in Trunking, Racks, etc.

Common For Installation In Air, Ground, Duct, Trench Etc.

TABLE – 66

No. of load conductors	4	6	8	10	12	16	20	24	28	32	36	40
Correction factor	0.8	0.69	0.62	0.59	0.55	0.51	0.48	0.43	0.41	0.39	0.38	0.36

Rating Factors for variation in Ambient Temperature for Cables

Laid in Air

For Installation in Air Only

TABLE – 67

Ambient temperature ° C	25	30	35	40	45	50	55
PVC insulated cables	1.49	1.40	1.31	1.22	1.11	1.0	0.86
XLPE insulated cables	1.27	1.22	1.17	1.12	1.06	1.0	0.94

Rating Factors for variation in Ground Temperature for Cables

Laid Direct in Ground or in Ducts

For Installation in Ground and Duct Only

TABLE – 68

Ground temperature ° C	15	20	25	30	35	40	45
PVC insulated cables	1.25	1.19	1.12	1.06	1.0	0.92	0.85

* Short circuit capacity of armour with higher size of armour wire than specified by the standard BS 6346 & BS 5467 for PVC & XLPE insulated cables respectively.

Note: Short circuit capacity of the armour can be increased by,

- 1) Using higher size of wire for armouring.
- 2) Using tinned copper wires in between steel wires.

Maximum Resistance of Conductor and Armour with PVC Insulated Cables

Cable Care

PRESERVATIONS/STORING & HANDLING OF CABLE DRUMS

1. STORAGE

- The site chosen for storage of cable drums should be well-drained and should preferably have a concrete surface, which will not cause the drums to sink and so lead to flange rot and cause extreme difficulty in moving the drums.
- The drums should be stored in such a manner as to leave sufficient space between them for air circulation. It is desirable for the drums to stand on battens placed directly under the flanges.
- In no case shall the drums be stored "on the flat side" i.e. with flanges horizontal.
- For drums, overhead shade is not essential except in areas where the rainfall is heavy. The cables should however be protected from direct rays of Sun by leaving the battens on or by providing some form of sunshielding.

2. HANDLING

- The drums should be rolled only in the direction of the arrow, indicated on them.
- No cable drums shall be slung except by a bar through the center bore. Also the cable drums shall be stored away from Boilers or Furnaces.
- When unloading the drums from lorry, a crane should be used if available and the drums carefully lifted and deposited on the ground. If crane is not available then the drums should be carefully rolled down a suitably arranged ramp or rails. Under no circumstances should the drums be dropped to the ground, as the shock may cause serious damage to the inner layers of the cables.
- Transportation over long distance, from storage site to work spots – The drums should be mounted on cable drum wheels strong enough to carry the weight of the drums, which are pulled by means of rope, or alternatively they may be mounted on trailer or vehicle with low loading platform for transportation to the destination.

INSTALLATION

OCI cables are suitable for installation in the ground, duct or air as recommended by all standards and specifications. OCI cables are easier to handle and install.

Wherever possible, installation radii should be large than those given below:

Type of cable	Overall diameter (D) mm	Min. internal Bending radius mm
Circular Copper conductor, unarmoured	Upto 25 mm Above 25 mm	4D 6D
Circular Copper conductor armoured	All	6D 8D
Shaped Copper/Aluminium conductor, armoured or unarmoured	All	

Inquiry/Ordering

INFORMATION REQUIRED WITH INQUIRY OR ORDER

For quick response, give following details of your cable requirement :

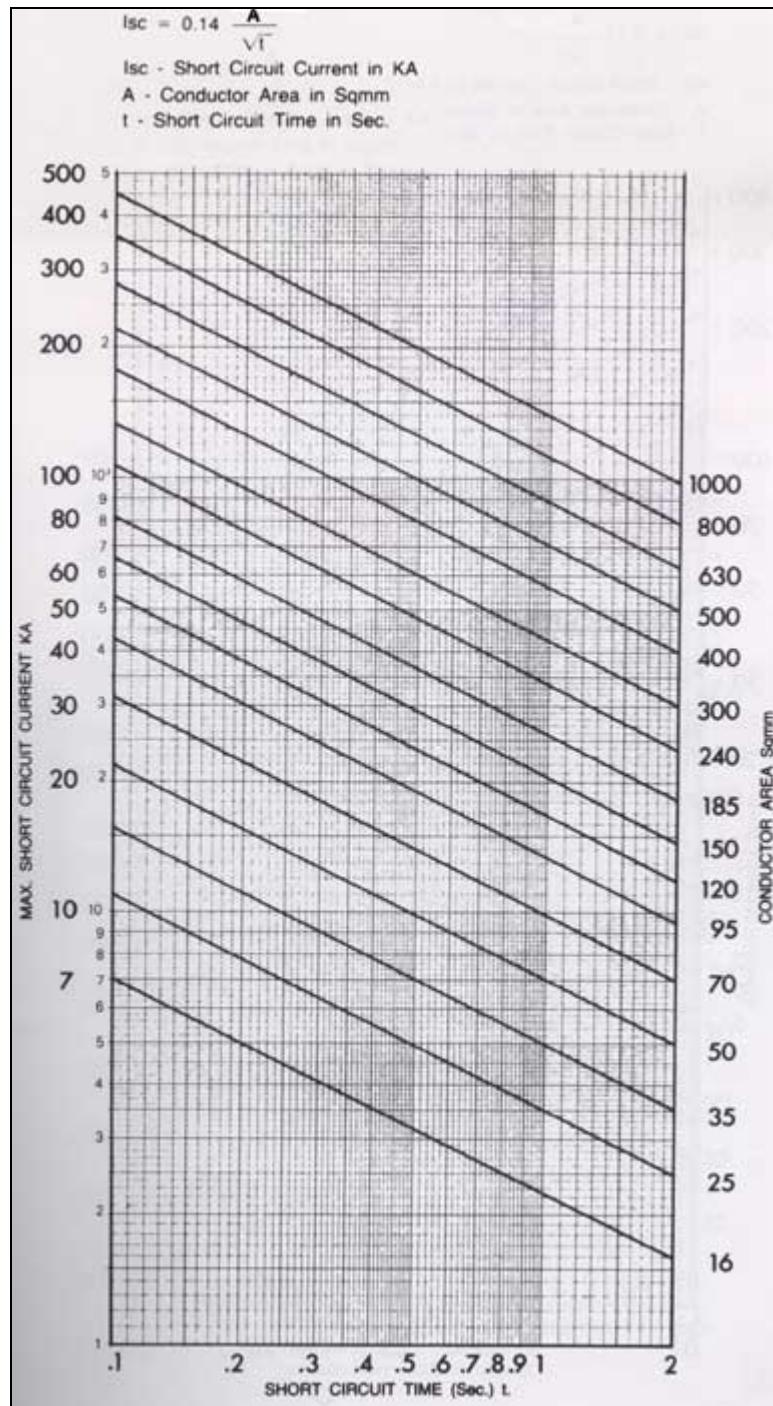

1. Type of cable	:	Armoured or Unarmoured
2. Relevant standard	:	BSS, IEC, VDE or any national or international standards
3. Voltage grade	:	600/1000 V or 1900/3300 V
4. Conductor	:	Copper or Aluminium
5. Insulation	:	XLPE or PVC
6. Armouring	:	Steel wire armouring, aluminium wire armouring or copper wire armouring
7. Number of cores	:	Indicate No. of corefxs
8. Size of conductor	:	sq. mm
9. Quantity	:	kms
10. Drum length	:	mtrs.
11. Other special requirements	:	

Note: Improvement being a continuous process at OCI, contents of this catalogues may be changed without any notice.

Short Circuit Curves

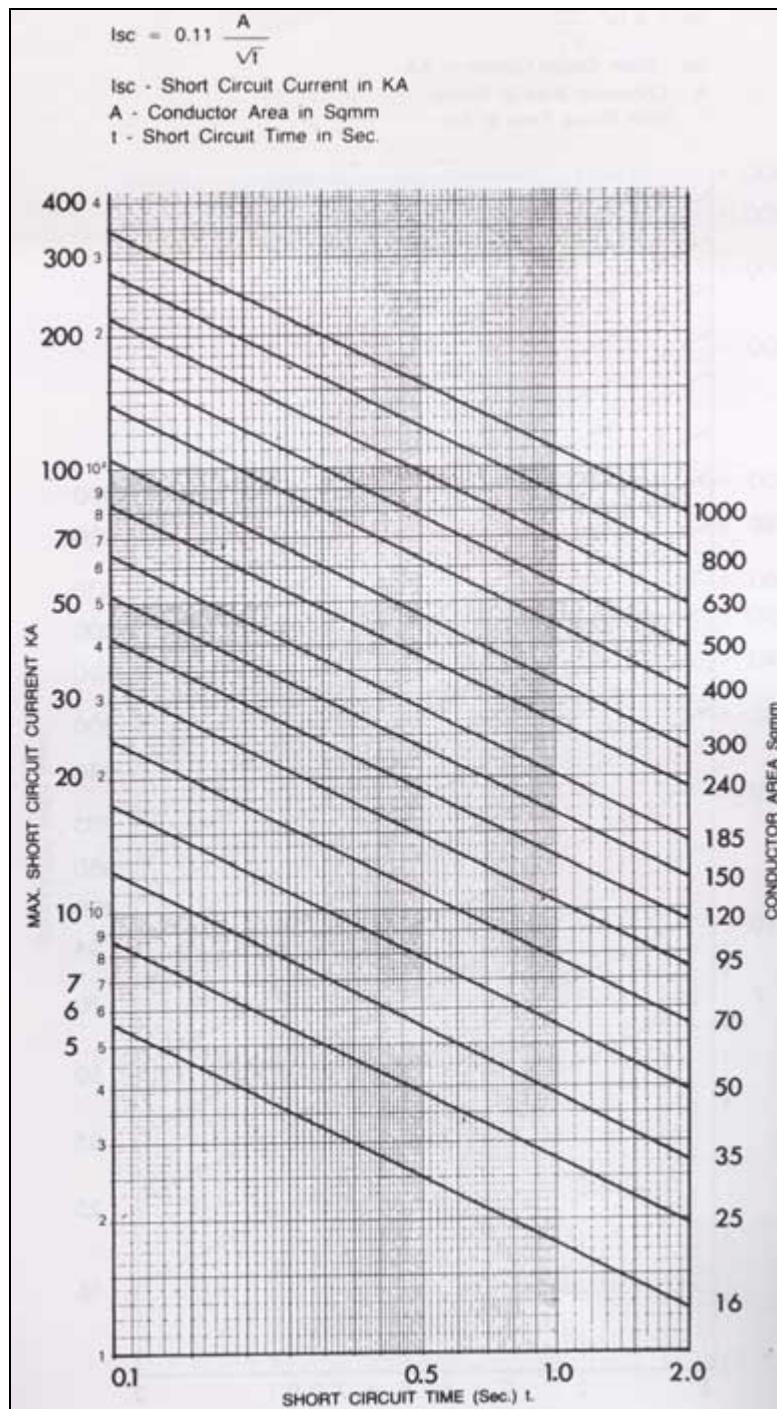

Short Circuit Current Curves for Copper Conductor XLPE Insulated Cables

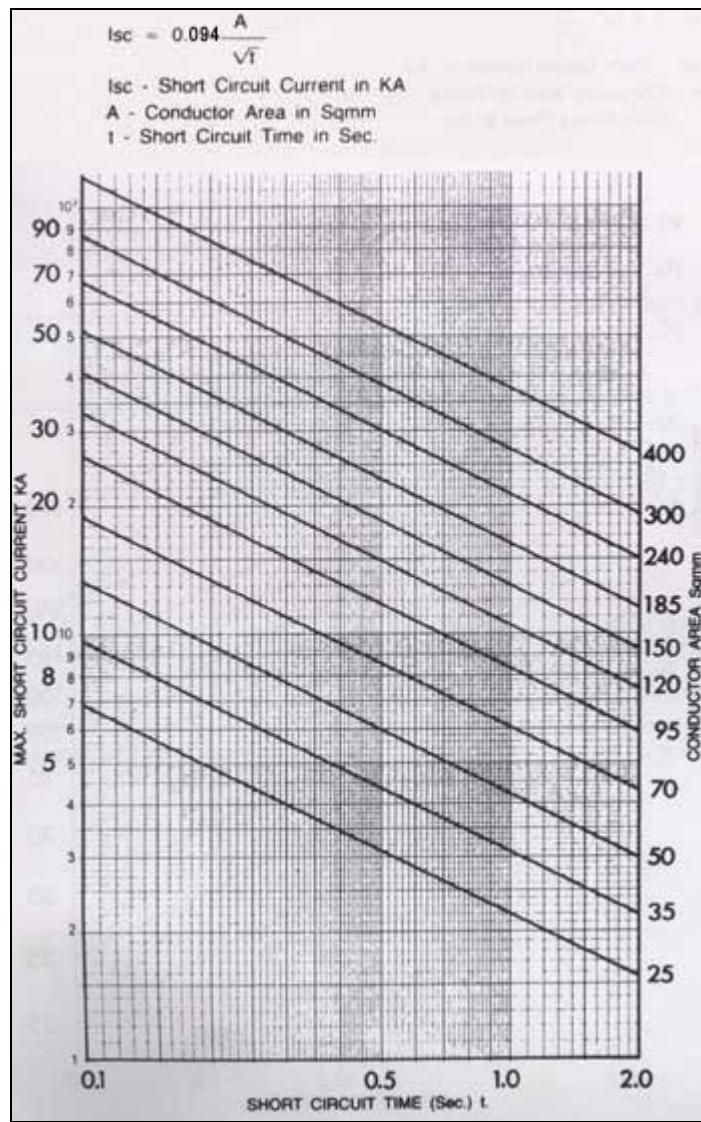

L.V. Power and Control Cables

Short Circuit Current Curves for Copper Conductor PVC Insulated Cables

Short Circuit Current Curves for Aluminium Conductor XLPE Insulated Cables

Short Circuit Current Curves for Aluminium Conductor PVC Insulated Cables
