

700 Series

- *Proven Digital Technology (PROCOM Series)*
- *Robust withdrawable case for flush mounting or mounted in a 19" C.E.E. rack*
- *Operating on RMS value*
- *Programmable dependent or independent time curves*
- *High power output units*
- *Serial communications*
- *Interchangeability with C.E.E. analogue technology relays*

CURRENT RELAY

VOLTAGE RELAY

The ultimate in power network supervision

GENERAL CHARACTERISTICS

- Robust R2 withdrawable case with short-circuitors on the current inputs - bases rear or front connection
- 2 high power output units with 2 output contacts each + 1 "watchdog" relay
- Programming with the assistance of 4 keys and an illuminated digital display
- Permanent display of the supervised quantity (in primary value)
On tripping, flashing display of the quantity causing the trip (until reset)
- Ease of use: wide setting range of thresholds and time delays
Programmable choice of type of time curve
- Compatible with our PROSATIN Supervision-Control systems
Communication by current loop 0-20 mA - Modbus - Operating speed 1 200 - 2 400 or 4 800 Bauds
Data available on communication network:
 - Permanently:
 - Primary value of each input and their mean value (3 phases versions)
 - Setting values
 - Under fault conditions:
 - Phase concerned and threshold reached
- Wide range of operation between temperatures - 10° to + 55°C
- Auxiliary voltage: dc or ac
48 V - 60 V - 110 V - 125 V
for other values please consult us
Burden: 6 watts at 48 volts
- Complies with Standard IEC and CE marking according to EN 50081-2 and 50082-2
Susceptibility and Emission
- Insulation:
 - . Dielectric withstand: 2 KV - 50 Hz - 1 min
 - . Insulation resistance: > 10 000 MΩ at 500 volts
 - . Impulse voltage withstand: 5 kV - 1.2/50 µsec

RMS 700

- RMS711 single phase or zero sequence
- RMS761 three phases
- RMS771 two phases + zero sequence
- RMS791* three phases + zero sequence

- Characteristic quantity: phases inputs: RMS current
zero sequence inputs: fundamental RMS current
- Rated Current IN = 1A or 5A
 - Burden on phases input <0,2VA at IN
 - on zero sequence input <1VA at IN
- Recommended current transformers, including a loop resistance of 0,1Ω (5A) ou 2Ω (1A) 5VA 5 P20

- Current Ranges

		Low setting	High setting
Phases Inputs		0.5 to 4IN (step 0,1IN)	1 to 25 IN (step 0.5IN)
Zero sequence Inputs	On TC	0.05 to 0.4IN (step 0,01IN)	0.1 to 2.5IN (step 0.5IN)
	On toroidal (100/1)	1 to 8A or 5 to 40A (step 1A)	5 to 40A or 10 to 250A (step 5A)

- Operating Values
 - independant time 100 % of setting
 - dependant time 110 % of setting
- Drop-off > 95 %
- Operating Curves (low setting) according to IEC255-3: independent or dependent time:

$$t(s) = \frac{T}{\frac{(I)^{\alpha}}{(I>) - 1}} \times \text{set value}$$

α : 0.02	T: 0.0466
α : 1	T: 9
α : 2	T: 99

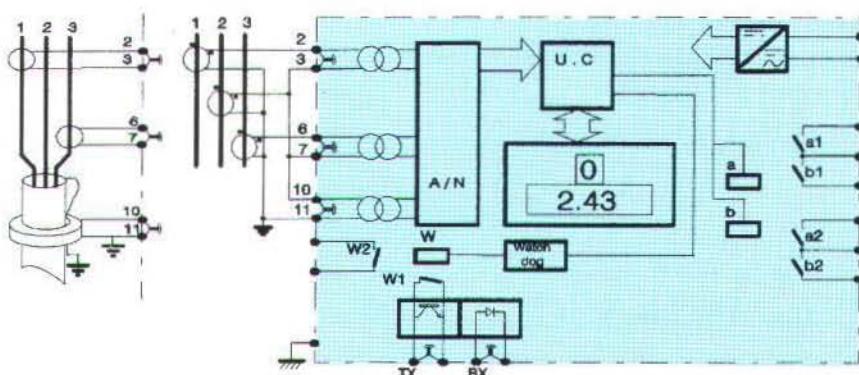

- Time setting Range
 - Low setting - independant time 0.1 to 30s (step 0,05s up to 3s and 0,5s upper)
 - dependant time 0.1 to 3s at 10 times the setting (step 0,5s)
- High setting: independant time 0.1 to 3s or instantaneous (step 0,05s)

- Overshoot ≈ 30ms

- Accuracy
 - Phases Setting 5% of the set value or 0.5% of IN
 - Zero Sequence Setting 0.5% of the set value or 0.5% de IN

- | | | |
|------|---|---|
| Time | - independent class 5% or ± 30ms | |
| | - dependent class 5% or 30msec for inverse or very inverse curves | |
| | | class 7.5% or 30msec for extremely inverse curves |

- User allocation of the outputs units

TMS 700

- TMS711 single phase: 2 maxi or mini settings
- TMS761 three phases: 2 maxi or mini settings
- TMS714 zero sequence single phase

• Characteristic Quantity:	RMS fundamental value						
• Rated voltage:	<i>(identical to V.T.s secundary nominal voltage)</i>						
	TMS 711	100/ $\sqrt{3}$ - 110/ $\sqrt{3}$ - 120/ $\sqrt{3}$ volts					
	TMS 761	100 - 110 - 120 volts 230 volts					
	TMS 714	100/3 - 110/3 - 120/3 volts 100/ $\sqrt{3}$ - 110/ $\sqrt{3}$ - 120/ $\sqrt{3}$ volts					
• Rated frequency:	50Hz or 60Hz						
• Primary rated voltage:	<table border="1"> <thead> <tr> <th>TMS711-761</th> <th>TMS714</th> </tr> </thead> <tbody> <tr> <td>100V to 240Kvolts</td> <td>100/$\sqrt{3}$ V to 240/$\sqrt{3}$ KV</td> </tr> </tbody> </table>			TMS711-761	TMS714	100V to 240Kvolts	100/ $\sqrt{3}$ V to 240/ $\sqrt{3}$ KV
TMS711-761	TMS714						
100V to 240Kvolts	100/ $\sqrt{3}$ V to 240/ $\sqrt{3}$ KV						
• Setting Range:	<table border="1"> <tr> <td>15 to 150% of VN (step 1%)</td> <td>3 to 60% of VN (step 1%)</td> </tr> </table>			15 to 150% of VN (step 1%)	3 to 60% of VN (step 1%)		
15 to 150% of VN (step 1%)	3 to 60% of VN (step 1%)						
• Each setting can be selected in Max. or mini function							
• Operating Curves:							
. Independant Time - Maxi and mini:	50msec to 99sec	step 10msec to 3sec	step 0.5sec upper				
. Dependant Time							
- function Max: extremely inverse	0.1 to 3sec to 2 Vsetting	step 0.05sec					
- function mini: inverse	0.1 to 3sec to 0,2 Vsetting	step 0.05sec					
• Drop-off:							
. function mini:	102% < V < 104%						
. function maxi:	96% < V < 98%						
• Accuracy:							
Operatin levels.....	1% of VN in frequency range FN \pm 5%						
Time delays	- independant time.....	2% or \pm 30ms					
	- dependant time	5% or \pm 30msec					
• Continous withstand:	TMS 711 - TMS 761	1.9 Vn					
	TMS 714	3 Vn					

• Inhibition : (TMS 761)

The TMS761 can be programmed to inhibit the operation of the minimum settings on simultaneous dispearing of the 3 phases inputs (<10 %)
