

INSTRUCTIONS

LAMP BURNOUT RELAYS

3S7505BR520A1—OPEN

3S7505BR520A3—WEATHER RESISTANT, DUST-TIGHT

3S7505BR520A5—OIL AND COOLANT RESISTANT

3S7505BR520A7—EXPLOSION PROOF*

The 3S7505BR520 Lamp Burnout Relay is connected in series with the lamp and its power source. Thus, when current flows through the circuit, the relay is energized. If the lamp should fail, current flow is interrupted and the relay drops out, activating an alarm or signal device. Similarly, failure of the power source will cause activation of the alarm or signal device.

Input Power: Light Source Transformer

Output Power to Lamp:

Connections to Light Source Transformer:

When using the low voltage supply from terminals on the 3S7505PG520 Photoelectric Relay, it is imperative that proper ground wire continuity be maintained as described below or non-operation and damage will result. It is recommended that black and white wires be used in order to observe the color coding shown on markings at the respective terminal boards. When light source transformers are used, white wire(s) should be attached to the "common" terminal and black wire(s) to the selected voltage terminal(s).

*This equipment is designed to meet NEMA requirements for hazardous locations, Class I, Group D and Class II, Groups E, F and G.

These instructions do not purport to cover all details or variations in equipment nor to provide for every possible contingency to be met in connection with installation, operation or maintenance. Should further information be desired or should particular problems arise which are not covered sufficiently for the purchaser's purposes, the matter should be referred to the General Electric Company.

Light Source or Scanner	Supply Voltage Tap or Terminal	Effective Voltage Drop In BR520	Net Lamp Voltage	Connections on BR520			
				From Supply		Lamp Wires	
				Ground or Common (White)	Volt- age (Black)	Ground (White)	Non- Grounded (Black)
3.5V, 2.5A Lamps:							
3S7505SL520	3.5	0.1	3.4	Term G	Term C	Term G	Term A
3S7505SL521	3.1	0.1	3.0				
3S7505SL530	2.7	0.1	2.6				
3S7505SC501							
2.5V, 0.35A Lamps:							
3S7505SL510	3.1**	0.6	2.5	Term G	Term B	Term G	Term A
3S7505SR501	2.7**	0.5	2.2				

**Note that the voltage tap used will not correspond to the lamp voltage because of drop in the BR520. When connected as above, actual lamp voltage will be as tabulated and lamp life will be as given for those voltages in the Light Source and Scanner instructions.

The 3S7505BR520 relay may be used for signaling or alarm with lamps other than the above (and with other devices) where current level lies either in the range 2.0 to 5.0 amperes or 0.3 to 0.75 amperes and drops to zero in the off (or "burnout") condition. The ungrounded side of the circuit should go in series with terminals (C) and (A) for the higher current rating or terminals (B) and (A) for the lower current.

Terminal (G) has no internal connection in the BR520 and may be used for convenient connection of the ground or common wire, as in the table above, or need not be connected, if desired. It is necessary to maintain correct common or ground wiring whether or not terminal (G) is used.

Output Contacts: SPDT
 Life at 115VAC: 100,000 cycles at 2A, 1,000 cycles at 5A.
 Contact Rating: 3A at 115V or 1A at 230V, resistive.

NOTE: Contacts are shown in de-energized position. Thus, if you expect to close a contact upon lamp failure you must use the N.C. contact.

GENERAL ELECTRIC SERVICE SHOPS

WHEN YOU NEED SERVICE . . . These G-E service shops will repair, recondition, and rebuild your electric apparatus. The facilities are available day and night, seven days a week, for work in the shops or on your premises. Latest factory methods and genuine G-E renewal parts are used to maintain peak

performance of your equipment. For full information about these services, contact your nearest service shop or sales office.
